ETW-TRC-CBL	TRC cable for Universal Remote Adapter

The ETwater™ Universal Remote Adapter is used to connect a wireless remote to an ETwater, Irritrol® or Superior controller. The remotes known to work are the Rain Master®, EICON and TRC.

Setup

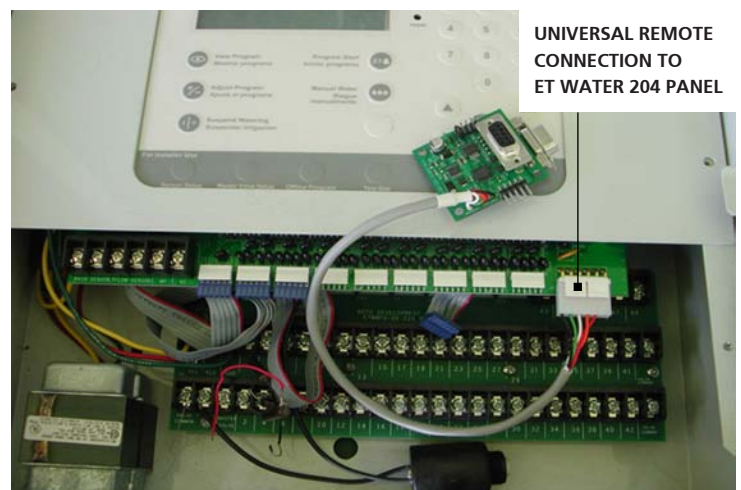

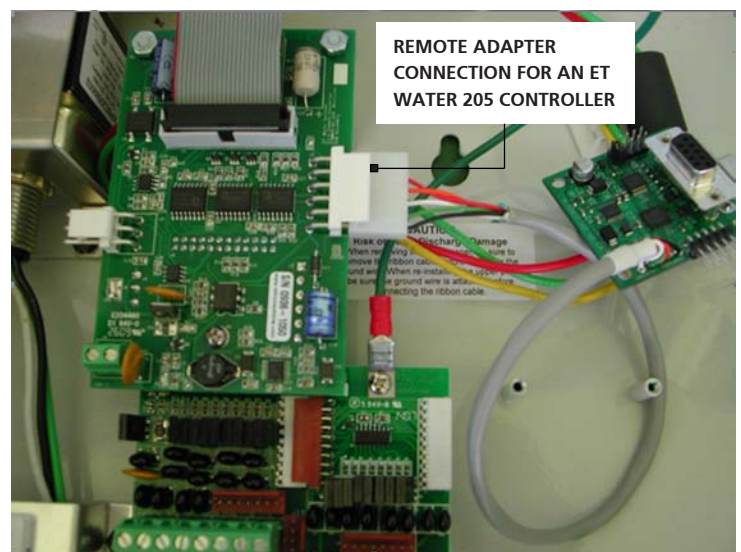

If you are using the Universal Remote Adapter on an ET Water controller then no jumpers have to be installed. To use it with the Irritrol or Superior panels a jumper needs to be installed between the bottom two pins of the left hand side header as shown below.

To install a Universal Remote Adapter, plug the fly wire with connector into the connector on the controller. On most controllers this connector is located on the bottom right hand side of the panel except the ET Water 205 type controller where it is located on the right hand side of the base (longer) module.

TOP RIGHT: Standalone Universal Remote plugged into an ET Water 205 controller.

BOTTOM RIGHT: Universal Remote plugged into an ET Water 204 panel. The connections on the Irritrol and Superior controllers are in a similar position.

A green LED on the component side of the board next to the 9 pin D connector will light if power is applied correctly

If using the Rain Master remote, use the cable supplied by Rain Master to plug into the Universal Remote. For the EICON or the TRC you will need the appropriate cable from ET Water.
