STATE OF THE ART TECHNOLOGIES CONVERGE

CORTE MADERA, CA, March 6, 2007 – ET Water Systems, LLC of Marin County, California announces an industry first with the integration of MP Rotator® technical data into its full line of web-based Smart Controllers. “Landscapers or homeowners who have ETwater® Smart Controllers can assure easy and accurate scheduling of MP Rotators by simply clicking on the picture of the MP Rotator in the online set-up screen”, said Bruce Cardinal, chief executive officer of ET Water. “The scheduling engine sets a customized MP Rotator run time, soak time and frequency for the user’s personal landscape profile and adjusts irrigation automatically based on daily ET and rainfall.”

“Providing a separate sprinkler category just for MP Rotators in ET Water’s software recognizes the growing awareness of just how complementary good sprinkler uniformity is to the water-savings potential of “Smart” controllers. We are excited to see ET Water takes this leadership position and accelerate the convergence of our two water-conserving technologies,” said Mike Baron, MP Rotator Manager for Walla Walla Sprinkler Company, a subsidiary of Nelson Irrigation Corp. of Walla Walla, Washington.

Water agencies increasingly promote and subsidize the installation of weather-based controllers and efficient, rotating stream nozzles because these technologies are proven water savers. For more information, please visit www.etwater.com and www.mprotator.com.

About ET Water: ET Water Systems, LLC was founded in Marin County, California, in the fall of 2002 with the vision of integrating the power of the Internet with sophisticated databases and horticulture science in order to simplify irrigation, improve plant health, conserve water, and reduce pollution caused by irrigation runoff. In September 2006, the ETwater® Smart Controller was awarded top honor for Environmental Technology Innovation by the Wall Street Journal. Visit www.etwater.com for more details.

About MP Rotator: Walla Walla Sprinkler Company, a turf & landscape irrigation company, is a subsidiary of Nelson Irrigation Corporation, a world leader in water application solutions. Rotator® technology was originally introduced to the agricultural irrigation market in 1987 and is now offered to the turf and landscape market as the MP Rotator: a matched-precipitation rate sprinkler even after arc & radius adjustment.
